

BACHELOR ENVIRONMENT AND SUSTAINABLE DEVELOPMENT

The Environment and Sustainable Development Bachelor's degree is a professional BAC+3 course that trains operational, multi-skilled profiles. The course trains multi-skilled professionals capable of tackling environmental and societal issues in a cross-disciplinary way within companies, local authorities and associations, with the aim of supporting ecological, environmental and societal transitions.

The Bachelor's degree focuses on a specific area of study during the course or as part of an apprenticeship (safety and the environment, corporate social responsibility, local sustainable development, environmental diagnostics, impact reduction and deployment of action plans, etc.).

Lessons

Pollution treatment (water, air, waste), diagnosis of polluted sites and soils, the objectives of sustainable development on a regional scale, putting sustainable development into action, environmental diagnosis in companies, implementing ISO 14001, ISO 45 001, promoting and raising awareness of the environment, the challenges of energy, renewable energies, life cycle analysis and eco-design...
