

BACHELOR GEOLOGY AND ENVIRONMENT

Technicians graduating from the UniLaSalle Polytechnic Institute with a specialisation in Geosciences and the Environment are employed in all areas of the ground and subsoil of the Geosciences and the Environment.

Geological technicians contribute their know-how to companies in all scientific and technological fields closely or remotely related to the Geosciences or the Environment (geotechnics and natural hazards, water and the environment, mineral resources, energy resources). They master the use of data acquisition tools in the field, in the laboratory or digitally (geophysics, laboratory tests, litholamellage, DRX analyses, geomatics, in-situ sampling, etc.).

Targeted professions

Geological technician
Geosciences research technician
Hydrogeological prospector
Field / Laboratory / Site geotechnician
Project database / Geographic information system manager
Etc...

Training highlights

9 weeks of field school during the course

1 drilling certification course at the end of the 2nd year

Courses and projects in the schools's Fablabs, Geolab and research platforms
